TITLE:

METHOD AND APPARATUS FOR VERIFICATION/AUTHORIZATION BY CREDIT OR DEBIT CARD OWNER OF USE OF CARD

A method and apparatus for protecting against the unauthorized use of a credit

CONCURRENTLY WITH MERCHANT TRANSACTION

card called CardSafe<sup>tm</sup> allows the credit card holder to finally approve any credit card

is concurrently notified of the transaction by a wireless device, such as a telephone call, pager

notification, or the like. Upon notification, the card holder can approve or disapprove of the

credit card transaction. Unless approved or denied by the credit card holder, the transaction

remains uncompleted. The approval or disapproval by the credit card holder can be accomplished

in real time or on a pre-selected basis. An unauthorized person would not be able to complete a

transaction The credit card owner can also deactivate the CardSafe<sup>tm</sup> system.
